Mitigation Examples for Jackson Park					
<p>Examples of RESEARCH mitigation may include, but are not limited to: a. Preparation of a Cultural Landscape Inventory; b. Jackson Park and Midway Plaisance Historic District NRHP Nomination Update (the NR nomination for Jackson Park and the Midway Plaisance was completed in 1972 and contained very brief detail. Updating National Register nomination forms would provide far greater detail about the areas proposed for listing on the National Register, including specific architectural/sculptural/siting details within that district that are considered character-defining elements or features); c. Archaeology/Research project on historic roadways and landscapes; d. Focused research and documentation on one theme of the park such as those suggested by the consulting parties: Olmsted's design, the role of African American historical features, like Ida B Wells and Frederick Douglass, women's history specifically for the Women's Garden, and the Cheney-Goode Memorial; e. Contribute available research to the virtual model of the world's fair in Chicago, work being done by UCLA Please enter any additional ideas for RESEARCH mitigation and/or provide feedback on these mitigation examples.</p>

1	May 18 2020 04:59 PM	What is the impact of the Americans with disabilities act on these plans which would severely impact your ability of a disabled like myself to enjoy Olmsted Carefully designed scenic route through the park? The mammoth Opc destroys the view of the lagoons and Wooded Isle, and the elimination of parking on Hayes drive prevents access to the parts of the park. also, there is a need for a more thorough shadow study showing the impact of the tower at all times of year, up through the time of the sunset, for its affects on the work done through GLF ER.		d. Olmstead's design intent, Including the importance of providing a pleasant way to get to work, as well as his basic intentions regarding the essence of the park and desire that any changes preserve that essence. Intent	
2	May 18 2020 04:59 PM	Transparent Investigation of avoidance and minimization strategies		No adverse impact on the Midway	

3	May 18 2020 04:57 PM	Research mitigation is an ineffective substitute for actual mitigation of the known adverse effects of the project as proposed.	Option 'b' should include detailed research into the deleterious effects of privatizing public parks, especially the Olmsted parks, which have been under threat in several locations in addition to Chicago.	
4	May 18 2020 04:34 PM	The proposed research mitigation is premature considering there is no genuine effort to publicly discuss, consider, and act upon the avoidance of adverse effects, which must be considered first before any form of mitigation. Deliberately refusing to undergo this process makes all claims that the land has value hollow.	With regards to a-e, research mitigation should only be considered after genuine efforts to publicly discuss, consider, and act upon the avoidance of adverse effects.	
5	May 18 2020 04:33 PM	1--The UPARR protection and new play area should be placed in a different location to avoid any additional adverse effect to the east section of the Midway and leave the east section as primarily an open flexible meadow as designed by Olmsted. The City should choose 67th and Champlain in West Woodlawn as its UPARR replacement location and apply to place that new site under UPARR protection. West Woodlawn is a neighborhood of about 23,000 residents, about a third of them children, which has no public parks or playgrounds within it. Two-thirds of residences do not meet the walkability standard of being within four blocks of a park or playground. For over a decade, community and community-based organizations and city plans have been calling for a new park and playground in West Woodlawn. 2--The City should not drain the ephemeral wetland but should rather replace it with a small, narrow, designed water feature consistent with Olmsted's design intentions and principles for the Midway. The Midway should be respected as an ecological resource that promotes the richness of flora and fauna of the entire area. 3--To avoid any adverse effect to the Women's Perennial Garden it should be preserved as is, which is as designed by Chicago Park District landscape architect May McAdams, with any minor adjustments necessary to bring it into ADA compliance.		

6	May 18 2020 03:30 PM	Conduct participatory and inclusive cultural heritage research in cooperation with members of the tribal nations who lived on the land that is now called Jackson Park. Seek to expose the timeline, uses, and relationships of flora and fauna to culture and community through to present day and to document what would be lost as a result of the proposed landscape destruction.			
7	May 18 2020 03:05 PM	Financially support TCLF's planned programming related to the 2022 bicentennial celebration of Frederick law Olmsted's birth, including an online guide to Olmsted landscapes; advocacy efforts in the form of Landslide 2022: The Landscapes of Frederick Law Olmsted; and a published hardbound volume on the Olmsted legacy, Frederick Law Olmsted: 200 Years, 200 Landscapes.			
8	May 18 2020 12:15 PM	Research should be conducted on how to avoid adverse effects by moving the undertaking to another location that does not sacrifice an historic park.		For b and d, the Cheney-Goode Memorial is a part of the Midway Plaisance and should not be included in any consideration of how to mitigate the adverse effects of the OPC in Jackson Park. The Midway is a separate entity and is not an adjunct to Jackson Park. Also, the necessary and legally required step of avoidance is ignored by moving toward mitigation without considering avoidance. Avoidance can best be achieved by moving the Center to a location that is not on public parkland.	
9	May 18 2020 10:48 AM			D	
10	May 18 2020 05:15 AM	"Research" on trees cut down will not mitigate the damage done by cutting the trees down!		a, b, c, d, e: Are not examples of "mitigation." They are only examples of what had been present before they were harmed.	
11	May 18 2020 02:10 AM			Regarding a-e, plaques, research and commemorative archives of any sort are a poor substitute for avoidance of damaging effects, especially given that none of these proposals are premised upon care and maintenance of the space and features as they exist (which you agree have value, or what would be the point of the research?). All the options listed would be exponentially less meaningful, to the point of pettiness, if they're being offered as a sop for effectively removing the things in the real world. Avoidance should be publicly considered in discussions with all consulting parties before starting any discussion of mitigation.	

12	May 17 2020 09:50 PM	Hire a firm which includes fluid engineers to see if the current water level from both the Lake and the Jackson Park Lagoon will impose significant difficulties in the construction of the underground parking garage, which will need a "bathtub" in order to protect it from the adjacent waters.		Examine the construction and costs associated with the building of the parking garage for the Museum of Science and Industry, which was done in 1998 for \$57.6 million by A. Epstein and Sons, International. They could tell you if the presence of water from the Lagoon and Lake present an obstacle to the construction of the parking garage.	
13	May 17 2020 07:30 PM			The Women's Garden should remain as it is now; it's beautiful; please don't destroy its current beauty	
14	May 17 2020 07:29 PM			Agree with all above	
15	May 17 2020 06:22 PM	focused research and documentation on the history of the MSI. It was initially the Fine arts Pavillion for the Columbian exposition/Julius Rosenwald and others' efforts to save the building after the Exposition closed. Incorporate into virtual model of the Exposition?		Feedback on d: see above concerning MSI. Love the idea of 'documentation' on Olmsted's design, perhaps with a permanent exhibit in the OPC museum. Would show changes to his design over time. Also like the other themes suggested. Feedback on e: perhaps make it possible to access the virtual model of the world's fair in the OPC museum.	
16	May 17 2020 05:53 PM			(a) and (b) inventories should be keyed to what's currently in the park, not to what will be left after the OPC is built	
17	May 17 2020 02:26 PM	Keeping Cornell Drive and other streets in the park open so that residents, particularly those who are elders, small children, or physically challenged can enjoy the park by driving through it. Narrow Cornell Drive and use traffic calming features to make it esthetically pleasing.		D	
18	May 17 2020 11:22 AM	Tying in the intentions of Olmsted's design, both for the world's fair and his plan for afterwards (for Jackson Park) for engaging the public and encouraging a wonder of nature, but also athleticism and health.		We particularly like the idea of research and presentation of this research on how Jackson Park has featured in the lives of prominent African Americans on the south side (d).	
19	May 16 2020 08:47 PM	Effect of cutting down 400 to 600 mature trees and replacing them with saplings.		Once the OPC is in place, all archaeological research will be foreclosed. Check with the Oriental Institute at the U of C if you're not sure if this would be the case.	
20	May 16 2020 08:38 PM			b. Updating of National Register forms must include complete AOE report identifying full adverse effects of OPC and road changes	
21	May 16 2020 06:14 PM	Survey and document current wildlife presence in Jackson Park, and provide and act upon recommendations for preserving and expanding wild sections of the park (e.g. Bobolink Meadow).		The supplied examples miss the main value of the park for South Side city dwellers.	
22	May 15 2020 10:26 PM	Avoidance and mitigation should not be a research matter, but should be an effort to implement avoidance and mitigation of deleterious impacts on the "historic roadways and landscapes."		The research ideas outlined in (a) through (e) are not mitigation, and the mischaracterization of these ideas as mitigation will not make them so.	

23	May 15 2020 08:55 PM	Number, species, age & size of all trees removed, including roadway changes		None are acceptable substitutes for Jackson Park as it is.	
24	May 15 2020 06:27 PM	Create a Chicago Lakefront National Park to keep politics out of the Chicago Park System in the future and help with the lift of maintenance and protections into the future. Such an idea would make the Chicago Lakefront truly "Open Free and Clear" of structures. We are also of the opinion that Cornell Drive does not need to be closed and demolished and it remaining open does not impact the operations of the proposed Obama Presidential Center. Furthermore, the OPC does not need to be a 230' tall building and could be more modest in height, and not exceed the height of the Museum of Science & Industry.		All the above and more, including the consideration of the Chicago Lakefront as a National Park and Lakeshore, but like the neighboring Indiana Dunes National Park and the Pullman National Monument in Chicago. This idea would be an amazing asset and gift to Chicago and the world, while also taking the politics out of Chicago's legendary parklands. It would also create a major tourist draw, 100 times that of Millennium Park	
25	May 15 2020 06:23 PM			d. Olmsted design--what was the original design and what changes in the park have been made since the original design.	
26	May 15 2020 04:59 PM	Find an alternative to closing Cornell and causing a traffic nightmare			
27	May 15 2020 04:05 PM	Bird migration		Impact on migrating birds	
28	May 15 2020 04:00 PM	Long-term observation of Park use by citizens. Place plaques and other informational materials along areas where people go.		A	
29	May 15 2020 09:31 AM	assessment			
30	May 15 2020 04:35 AM	Take a survey of all who grew up in this area of the city.			
31	May 15 2020 04:18 AM	Traffic patterns			
32	May 15 2020 03:50 AM	I am totally against the OPC being put in Jackson Park. I don't need to say anything further. Washington Park would be a far better less disruptive to the surround area.		C	
33	May 15 2020 03:16 AM	Research the legal standard for the use of the term mitigation as including avoidance and minimization as required by the legal standard of resolving adverse effects found in an AOE effect		A, B, & C do not address any avoidance or minimization steps to address the found adverse effects nor do they document the impact of the adverse effects on the historic character being changed by the propose project from spatial character, to road configuration to major use changes with introducing new density and height into a historic landscape, Even as an attempt at documenting the historic character being changed, none of these meets that standard.	

34	May 15 2020 02:55 AM			Jackson Park is such an important resource that I don't understand why you wouldn't do ALL the above and cover all the themes in d) above	
35	May 14 2020 10:40 PM			a, b, c, d, e look good. a is especially important, d African Americans and Women in park history. Add to e seeing if the UCLA virtual can be linkked or in the Museum and onv irtual tours to be developed. For c properly monitor all construction and exccamation for archeological elements..	
36	May 14 2020 10:32 PM	If the project goes through and many historic characteristics are destroyed, document by every method available all that was destroyed.			
37	May 14 2020 07:50 PM	When Zaha Hadid was designing the Dongdaemun Design Plaza in Seoul, South Korea, she found design remnants of an ancient town below where the foundation was to be placed. In a respectful way, she moved the building around these foundations, exposing what was once underground and making reference to the rich history of Korean culture. The Presidential Center would be placed over the foundation of the Horticulture Building of the World's Fair. Is there a possibility for the the design program of the Presidential Center to acknowledge what has come before by exposing those foundations found below? The metaphor is beautiful of a Presidential Center sitting alongside the remnants of a building dedicated to horticulture.		C, D	
38	May 13 2020 06:43 PM	None		I support mitigation in the areas of b, d and e. As it relates to example d, I prefer new research and documentation focus on the role of historical African Americans	
39	May 13 2020 05:52 PM			c. Disagree with archaeology project on historic roadways.	

Mitigation Examples for Jackson Park

Examples of INTERPRETATION mitigation may include, but are not limited to: a. An interpretive display in the Midway Plaisance that describes water conservation techniques and the effects of global warming; b. Plaques/signage of historically significant persons/events in Jackson Park; c. Engage children in developing historical plaques and incorporate history and art activities/lessons into their classroom education; d. Create an interpretive map or other visual reference item showing the history of the Jackson Park site how it changed over time; e. Create an indoor exhibit using the historical research and data collected; f. Interpret Jackson Park's women's history through multimedia methods and signage, specifically for the Women's Garden, and the Cheney-Goode Memorial. Please enter any additional ideas for INTERPRETATION mitigation or provide feedback on these mitigation examples.

Answer Choices	Responses
INTERPRETATION mitigation	71.43% 25
INTERPRETATION mitigation	74.29% 26
Answered	35
Skipped	42

Respondents	Response Date	Other ideas for INTERPRETATION mitigation:	Tags	Feedback on INTERPRETATION mitigation examples - please include the letter of the above example in your response:	Tags
1	May 18 2020 04:59 PM	Avoidance as per NEPA			
2	May 18 2020 04:59 PM	4. Discussion of the community's role in altering the original design proposal, to be written by the organization's playing a role in this, including but not limited to Jackson Park Watch, FOTP, and POP. Interpretation mitigation is also an ineffective substitute for actual mitigation of the known adverse effects of the project as proposed.		Option 'b', indeed all the options are nice projects, could be achieved without building in Jackson Park, and but do not justify the scale or location of the project as proposed.	
3	May 18 2020 04:57 PM	Interpretation mitigation should not substitute the process to publicly discuss, consider, and act upon the avoidance of adverse effects, which must be considered first before any form of mitigation.		Regarding a-f, interpretation mitigation should not outright replace the process to publicly discuss, consider, and act upon the avoidance of adverse effects.	
4	May 18 2020 04:34 PM				

1--The UPARR protection and new play area should be placed in a different location to avoid any additional adverse effect to the east section of the Midway and leave the east section as primarily an open flexible meadow as designed by Olmsted. The City should choose 67th and Champlain in West Woodlawn as its UPARR replacement location and apply to place that new site under UPARR protection. West Woodlawn is a neighborhood of about 23,000 residents, about a third of them children, which has no public parks or playgrounds within it. Two-thirds of residences do not meet the walkability standard of being within four blocks of a park or playground. For over a decade, community and community-based organizations and city plans have been calling for a new park and playground in West Woodlawn. 2--The City should not drain the ephemeral wetland but should rather replace it with a small, narrow, designed water feature consistent with Olmsted's design intentions and principles for the Midway. The Midway should be respected as an ecological resource that promotes the richness of flora and fauna of the entire area. 3--To avoid any adverse effect to the Women's Perennial Garden it should be preserved as is, which is as designed by Chicago Park District landscape architect May McAdams, with any minor adjustments necessary to bring it into ADA compliance.

May 18 2020
5 04:33 PM

6 May 18 2020 03:30 PM Create a series of visual interpretations of the environmental impacts that will be the result of clear cutting over 1000 trees in the park and disruption of natural vegetation in order to accommodate the proposed OPC. Show the negative impacts on air quality due to increased pollution from hundreds of cars in and out of the parking lot and food trucks with idling engines for hours on end; the effects of newly introduced water hazards due to stormwater flooding of the lagoons and elimination of existing, natural swamp bioswales; the increases in residential summertime energy bills due to the removal of hundreds of shade trees, etc.

7 May 18 2020 03:05 PM Financially support TCLF's planned programming related to the 2022 bicentennial celebration of Frederick law Olmsted's birth, including interpretive programming in the form of an online guide to Olmsted landscapes and a published hardbound volume on the Olmsted legacy, Frederick Law Olmsted: 200 Years, 200 Landscapes.

8 May 18 2020 12:15 PM The process should interpret any adverse effects on Jackson Park as being limited to Jackson Park and not include the Midway Plaisance as a backstop.

9 May 18 2020 10:48 AM A, D

10 May 18 2020 05:15 AM Although the examples of enhancements provided would be good, none is an example of mitigation, i.e., reducing harm brought by the project.

For a and f, the Cheney-Goode Memorial should not be interpreted as part of the Jackson Park mitigation. It is a part of the Midway Plaisance, which itself does not exist to resolve problems in Jackson Park. The Midway should not be interpreted as if it is an open space upon which Jackson Park's problems can be disposed.

a, b, c, d, e, f: are not examples of "mitigation." To reduce harm, juts leave the Midway alone!

May 18 2020
11 02:10 AM

May 17 2020
12 09:50 PM

a. A display that shows how Lake Shore Drive will be impacted by the rising Lake levels and make it impossible to widen the road.

May 17 2020
13 09:10 PM

May 17 2020
14 07:30 PM

May 17 2020
15 07:29 PM

Regarding a-f, plaques, research and commemorative archives of any sort are a poor substitute for avoidance of damaging effects, especially given that none of these proposals are premised upon care and maintenance of the space and features as they exist (which you agree have value, or what would be the point of the research?). All the options listed would be exponentially less meaningful, to the point of pettiness, if they're being offered as a sop for effectively removing the things in the real world. Avoidance should be publicly considered in discussions with all consulting parties before starting any discussion of mitigation.

d. Show how private enterprise has destroyed over 400 trees in order to build a private building in a public park.

f. Women's Garden should be preserved as it was designed without modification.

Leave the Midway untouched

Thank you for including our previous suggestion of Interpret Jackson Park's women's history through multimedia methods and on-site signage for the Women's Garden and the Cheney-Goode Memorial. The additional detail we previously submitted regarding these important places within Jackson Park were: •The Women's Garden, built in 1936 and designed by May McAdams, should not only be preserved (avoidance is preferred), but interpreted with appropriate signage that notes its significance as the first woman-designed public landscape in the city, and that tells the story of McAdam's career. •The Cheney-Goode Memorial, dedicated in 1932, should be given a prominent location, conserved and interpreted with appropriate signage. The Chicago Park District's website states, "The Cheney-Goode Memorial is one of Chicago's few early monuments dedicated to women who played a significant role in the city's history. It honors two accomplished women who lived on the city's South Side, Flora S. Cheney and Katherine H. Goode." Few people know this monument exists or the role these women played in Chicago and Illinois politics. •The location of the Woman's Building from the World's Columbian Exposition of 1893 should be interpreted where appropriate at the OPC so that its prior existence on the site is understood.

See above in response to question 3: Have access to the virtual model of the Columbian Exposition in the OPC museum.

May 17 2020 16 06:22 PM

May 17 2020 17 05:53 PM

May 17 2020 18 02:26 PM Keep the historic Women's Garden in its existing location and provide historical interpretation

May 17 2020 19 11:22 AM How has music shaped activity in Jackson Park through the years?

May 16 2020 20 08:47 PM Describe how the site was created out of a marsh and is still basically sod on top of water.

May 16 2020 21 08:38 PM

May 16 2020 22 06:14 PM Provide an online, printable resource for identifying key species using Jackson Park as migratory stopover or habitat

May 15 2020 23 10:26 PM Cornell Drive should be preserved, with an interpretive sign commemorating this roadway as part of Olmsted's historic traffic circulation design.

May 15 2020 24 08:55 PM No historical signage is acceptable replacement for Jackson Park unless it is a gravestone.

a, b, c, d, e, and f are all positive examples of interpretation mitigation. Water/climate issues could be addressed in some form on the Midway, as well as with interpretive materials in the OPC itself. I would also welcome interpretive maps and interpretive exhibits on the history of JP.

(b) is good. (a) is fine, but not nearly as good as actually taking practical steps to deal with rising water levels

F

Love "d" and would advocate for this being in the Presidential Center somewhere, maybe with VR headsets? This is an extension of "c"; not only engage children, but also design the plaques/memorials with them in mind. Don't necessarily have all of the plaques high up off the ground; use visuals that would draw kids in. Make it accessible to those who might not want to sit and read for 10 minutes.

a. Describe how the OPC will avoid all global warnings (your word, not mine) about how it will slaughter many of the three million birds following the Lake Michigan Flyway twice a year.

For all of these suggestions, who/which agency would be in charge of developing the displays, in locating the displays, and in maintaining them over time? Without such information, it is impossible to judge the merit of the suggestions. For item b itself, the idea of littering the park with plaques and signs without a master plan/narrative would be disruptive.

Again, the supplied examples miss the main value of the park for South Side city dwellers, namely as a nature area easily accessible by South Siders

Interpretation, without on the ground avoidance or mitigation of the actual deleterious impacts of the proposed project, is not mitigation.

None are acceptable substitutes

25 May 15 2020 06:27 PM These are all suggestions, but none equal the loss associated with the destruction of hundreds of trees and 20 acres of land in Jackson Park. The best idea of all is to move the Obama Presidential Center to another City and/or University of Chicago site nearby.

26 May 15 2020 04:59 PM This is putting the cart before the horse. Get the basic design of the building and the layout of the streets in order first.

27 May 15 2020 04:00 PM The Women's Garden should remain where it is with more plant identification

28 May 15 2020 04:35 AM Get real. This project is a monstrosity.

29 May 15 2020 03:36 AM

30 May 15 2020 03:16 AM

31 May 15 2020 02:55 AM

32 May 14 2020 10:40 PM Add to research plus interpretive topics role of rec, sports, golf and why they matter. As a subject of interactive interpretation, "whose park?" how, why, has this changed. Make sure there is a section on the different "rooms" of the park as the park seems to many to "lack focus, destination purpose."

33 May 14 2020 10:32 PM Seems like interpretation here means telling the story of what has been lost. While we hope things don't have to be lost, interpret in every way possible that which is going to be erased.

34 May 13 2020 06:43 PM Interpret the role played by African Americans at the World's Fair

These are all token mitigation efforts, when the mitigation should be the reduction in the size of the buildings and proposed Obama Presidential Campus.

F

this can be controversial - who determines effects 4a
A through E can all be accomplished without the construction of the project that gives rise to the adverse effects to be addressed. They are non responsive to the impact of the project on a historic landscape and fail to identify ways to avoid or minimize its impact effects on that landscape in scale, spatial arrangement or natural context.

Please try to make any interpretive resources informative, well-designed, and programmatic.

a, b, c, d, e, f good. In c add youth docents

Due to slavery, African Americans have far less physical collections of their role in various parts of history. Therefore, I prefer plaques, signage and statues (b)of historically significant persons (especially African Americans) and their relationship to Jackson Park

May 13 2020
35 05:52 PM

b. if include interpretive signing, must include NIKE missile sites as a significant era in Chicago and Jackson Park history.

Mitigation Examples for Jackson Park

Examples of RESTORATION mitigation may include, but are not limited to buildings and/or statues such as: a. the Cheney Goode Memorial, including the sundial and bench; b. the Statue of the Republic including the elaborate base and formal paving around the monument; c. the English Comfort Station; d. landscape features along Stony Island (the screened buffer has been altered over time and the landscape understory is no longer present in several sections along Stony Island). Please enter any additional ideas for RESTORATION mitigation or provide feedback on these proposed mitigation ideas.

Answer Choices	Responses

	May 18 2020				
1	04:59 PM	Avoidance of adverse effect on the Midway			Narrow options in the list; not a scientific poll
	May 18 2020				Examples 'a' through 'd' are all maintenance projects that should be performed regardless of other projects in Jackson Park. None of these projects can mitigate the known adverse effects of the OPC project as proposed.
2	04:57 PM				
	May 18 2020				In relation to a-d, restoration mitigation absolutely must not come before a real effort to publicly discuss, consider, and act upon the avoidance of adverse effects. Any claim to care for the land before following through this process is severely disingenuous at best.
3	04:34 PM	Restoration mitigation should only be considered after a genuine effort to publicly discuss, consider, and act upon the avoidance of adverse effects.			

1--The UPARR protection and new play area should be placed in a different location to avoid any additional adverse effect to the east section of the Midway and leave the east section as primarily an open flexible meadow as designed by Olmsted. The City should choose 67th and Champlain in West Woodlawn as its UPARR replacement location and apply to place that new site under UPARR protection. West Woodlawn is a neighborhood of about 23,000 residents, about a third of them children, which has no public parks or playgrounds within it. Two-thirds of residences do not meet the walkability standard of being within four blocks of a park or playground. For over a decade, community and community-based organizations and city plans have been calling for a new park and playground in West Woodlawn. 2--The City should not drain the ephemeral wetland but should rather replace it with a small, narrow, designed water feature consistent with Olmsted's design intentions and principles for the Midway. The Midway should be respected as an ecological resource that promotes the richness of flora and fauna of the entire area. 3--To avoid any adverse effect to the Women's Perennial Garden it should be preserved as is, which is as designed by Chicago Park District landscape architect May

4 May 18 2020 04:33 PM McAdams, with any minor adjustments necessary to bring it into ADA compliance.

a, b, c, and d are good suggestions

Restore dignity to the civic engagement process through actual engagement with citizens. According to the National Historic Preservation Act seeking ways to avoid and minimize adverse effects are two steps that come BEFORE mitigation is to be considered. The current process has skipped over those steps. Respecting the process is your responsibility.

5 May 18 2020 03:30 PM

6 May 18 2020 03:05 PM Restoring Cornell Drive to the dimensions envisioned in the Olmsted plan.

For a, the Cheney-Goode Memorial should not be included in any efforts to restore the damage that would be done to Jackson Park by the proposed project. Restoration is only a necessary step if we accept that the park will cease to be a park through this project. The Cheney-Goode Memorial does not and cannot restore the damage this project will do to Jackson Park and should not be included in this step.

7 May 18 2020 12:15 PM Restoration does not need to occur if attention is paid to avoiding adverse effects in the first place.

8 May 18 2020 10:48 AM

All of 5

9 May 18 2020 05:15 AM Do the listed maintenance, but do not harm the Midway in the process.

a, b, c, d: Restoration and maintenance of the listed areas are a great idea. However, they do not reduce the damage to be done by the proposed project.

May 18 2020

10 02:10 AM

May 17 2020

11 09:10 PM

The City should honor the true spirit of UPARR and the City ordinance that promised replacement parkland to create new, replacement parkland and not to destroy the open, meadow nature of the Midway. Rather than seeking to eliminate the ephemeral wetland of the Midway, enhance it by creating a year-round pond in one corner. Respect the design and legacy of noted women designers and keep the current design of the Women's garden and keep it as a separate park.

May 17 2020

12 08:52 PM

May 17 2020

13 07:30 PM

Build a lovely pedestrian bridge over Cornell Drive linking the Presidential Center with sidewalks to MSI In addition to the English Comfort Station, 1936, designed by E.V. Buchsbaum, we had previously suggested for restoration, we also submitted for consideration (August 30, 2019) Iowa Building comfort station in the northeast corner of Jackson Park at 56th Street. •Darrow Bridge, constructed in 1880 and designed by Daniel Burnham and John Wellborn Root, built as the Columbia Bridge and dedicated by Mayor Richard J. Daley as the Clarence Darrow Memorial Bridge in 1957. •9th hole golf shelter, circa 1912, designed by the D.H.

May 17 2020

14 07:29 PM

Burnham & Co. •Cecil Partee golf shelter building, circa 1900. East Bridge (Clarence Darrow bridge). Shore line/stone barriers along Lake Michigan near La Rabida.

May 17 2020

15 06:22 PM

Keep Cornell Drive open so that residents can enjoy views of The Republic at all angles as they approach by car.

May 17 2020

16 02:26 PM

May 17 2020

17 11:22 AM

Please drain the cesspool that is the Eastern end of the Midway. It is oppressively stinky when there is standing water there, with all the goose poop, etc... It is not a natural wetland, so either convert it to that, or just put in drainage that will take away the standing water that the geese poop in.

May 16 2020

18 08:47 PM

How about not building the OPC in Jackson Park so you don't need any RESTORATION mitigation.

May 16 2020

19 08:38 PM

Restoration of Cornell Drive as it was initially laid out (40' wide) by Olmsted, as outlined in JPW letter of May 5, 2020 submitted to Matt Fuller

No structures or playground equipment should be placed on the eastern end of the Midway
d. Stony Island should be left as it is without widening it, because Cornell Should be kept open

Do not alter road patterns; there is certainly not enough public funding for such given the current COVID-19 crisis

I support a, b, d and d.

B

Relevant to "d": Keep in mind that many of the people that live across Stony Island from Jackson Park walk over there to BBQ. I'm sure they don't have permits to do this, but they will do it nonetheless. Either the Park District and the Foundation embrace this and make it a controlled environment for BBQing (sometimes with a large number of people), or they design to really ensure that people are dissuaded from gathering there. Otherwise, a lot of effort could go into replanting that area only to have people just destroy it.

What about Jackson Bark? What about Wooded Island? What about the Olmsted design for Jackson Park?

abcd -- restoration (i.e., long deferred maintenance) of these features does nothing to address the adverse effects identified in this Section 106 review

20	May 16 2020 06:14 PM	Bridges in and around the lagoon	
21	May 15 2020 10:26 PM	Restoration mitigation should include any necessary maintenance of Cornell Drive as a public roadway.	Suggestions (a) through (d) fail to avoid or mitigate the deleterious impacts of the proposed project.
22	May 15 2020 08:55 PM	Move the OPC to another site, west or south of Jackson Park	All are necessary but not as a substitute for the loss of the Park to a landscaped campus.
		Restoration mitigation should include a full restoration of Jackson Park, it's lagoon, its various islands by Olmsted that have been filled-in over time, the restoration of it's historic bridges, the various buildings some of which are in terrible disrepair, with holes in their roofs--or no roofs at all. This would include all of the "comfort stations," and the Iowa Building. In addition the Columbia/Clarence Darrow Bridge has been fenced-off for more than a decade and so much of the park neglected. This all should be restored and reinvested-in by the Obama Foundation and all governmental partners. .	
23	May 15 2020 06:27 PM	Address the street closure of Cornell and the building design first	A, B, C, D and Other. All elements of historic Jackson Park should be restored, with professional consultants and with the highest standards for a true restoration of the park.
24	May 15 2020 04:59 PM	Restore tree cover, restore natural area designation	Replace dead, dying trees, restore shrub layer
25	May 15 2020 04:05 PM	Improve all tennis courts including the ones along Stony, Cornell Drive and Lake Shore Drive	D
26	May 15 2020 04:00 PM	Mock buildings from 1893	
27	May 15 2020 04:35 AM	Trees, trees, trees. Do not disrupt traffic flows.	
28	May 15 2020 04:18 AM		
29	May 15 2020 03:36 AM	Restore the character of Jackson Park and the Midway Plaisance by avoiding the impacts of the proposed project as identified in the findings of adverse effects..	replace screened buffer d Items a-d all can be completed without incurring the adverse impacts from the proposed project. They ar enhancements long sought by park and community stakeholders and have no relation to the project. This underscores the project as an intrusion into this historic landscape that must be addressed by avoidance or minimization as required by the regulations rather than by claiming items long sought as mitigation. Mitigation as defined here includes such avoidance and minimization.
30	May 15 2020 03:16 AM		I do not understand what d) above means. Please don't try to confuse us with jargon.
31	May 15 2020 02:55 AM	Cheney Bench, old bike paths. Landscape northnof OPC esp east of Stony toward Island, MSI	a, b, c, d. d- hadn't thought of that- great. Need to add other structures even though remote- Coast Guard, 63rd beachhouse (threatened by water/erosison) and Iowa Bldg
32	May 14 2020 10:40 PM	Restore and make accessible the EXISTING women's garden instead of destroying it and building a new one.	
33	May 14 2020 10:32 PM		

May 13 2020 park land restoration and/or enhancement in South
34 06:43 PM Shore, Woodlawn and Washington Park to mitigate
May 13 2020 land lost for OPC developmentn,
35 05:52 PM

I support all four restoration ideas already mentioned (a,b,c and d)

n/a

Mitigation Examples for Jackson Park

Examples of DESIGN REVIEW mitigation may include, but are not limited to: a. Use of a landscape architect specialist to provide input on

May 18 2020
04:33 PM

1--The UPARR protection and new play area should be placed in a different location to avoid any additional adverse effect to the east section of the Midway and leave the east section as primarily an open flexible meadow as designed by Olmsted. The City should choose 67th and Champlain in West Woodlawn as its UPARR replacement location and apply to place that new site under UPARR protection. West Woodlawn is a neighborhood of about 23,000 residents, about a third of them children, which has no public parks or playgrounds within it. Two-thirds of residences do not meet the walkability standard of being within four blocks of a park or playground. For over a decade, community and community-based organizations and city plans have been calling for a new park and playground in West Woodlawn. 2--The City should not drain the ephemeral wetland but should rather replace it with a small, narrow, designed water feature consistent with Olmsted's design intentions and principles for the Midway. The Midway should be respected as an ecological resource that promotes the richness of flora and fauna of the entire area. 3--To avoid any adverse effect to the Women's Perennial Garden it should be preserved as is, which is as designed by Chicago Park District landscape architect May McAdams, with any minor adjustments necessary to bring it into ADA compliance.

a and b are good suggestions

6

May 18 2020
03:30 PM

Conduct an open and participatory design review that considers other locations including Washington Park that were already documented to provide greater economic impact, be more inclusive of history and culture; with better transportation options and adjacent to public land. There would be no need to mitigate the adverse effects of destroying a national landmark park that occupies centuries-old tribal land if a truly civic-minded approach and supporting process were a priority for this proposed project.

7	May 18 2020 03:05 PM	Revisit the design of the OPC tower/museum to reduce its adverse effects, which are now clearly documented, on Jackson Park.	
8	May 18 2020 12:15 PM	Remove the Cheney-Goode Memorial from Design Review mitigation as it is part of the Midway Plaisance and not Jackson Park.	For b, the Cheney-Goode Memorial should not be included in any mitigation efforts directed at Jackson Park. The Cheney-Goode Memorial is part of the Midway Plaisance, which is not responsible for the damage that will be done to Jackson Park by the proposed project.
9	May 18 2020 10:48 AM		c
10	May 18 2020 05:15 AM	Leave the Midway alone. No additional features added to the east end of the Midway. Just do the maintenance.	b. No additional features added to the Midway.
11	May 18 2020 02:10 AM		All Consulting Parties should be invited to discuss avoidance of adverse effects before mitigation is considered.
12	May 17 2020 09:50 PM	c. The idea of widening Lake Shore drive to offset the extra traffic that would accrue if Cornell Dr. is closed will be impossible to construct because of the rising Lake levels. There is too much traffic during morning and evening rush hours for the present Drive and Stony Island to handle. In addition, there are schools along Stony Island where there will be students and school buses at this time. There are better solutions further inland, in either Woodlawn or west of Washington Park.	a. Moving west of Stony: https://dirt.asla.org/2018/03/07/michael-sorkin-ten-theses-on-the-obama-presidential-center/ . Moving West of Washington Park: http://www.jrarch.com/obama-presidential-center-washington-park-18 West of
13	May 17 2020 09:10 PM		c. Cornell should be kept open. The tower should be downsized. Preferably the OPC should be moved out of the park, preserving the integrity of Jackson Park.

14	May 17 2020 08:52 PM	<p>Since the Obama Presidential Center (OPC) was first proposed and traffic studies were first done, Lake Michigan has experienced rising water levels. South Shore Drive/US Route 41 has been closed several times over the last few months during periods of high winds. Additionally, several other times when this route remained open, the City of Chicago's Office of Emergency and Management Services has warned area residents through robocalls to avoid it because of high winds. Such closures and warnings are likely to become more frequent given climate change and will result in dangerous and heavily congested traffic and increased pollution in the area. We are therefore deeply alarmed about the closure of a major alternate route to this heavily trafficked area. In addition, we have concerns about the impact upon water tables of the planned OPC campus given its proposed, large underground complex. We are concerned both about environmental damage to the surrounding park area and exacerbation of the rising water levels in nearby bodies of water.</p>	
15	May 17 2020 07:30 PM	Add a playground south of the Center, where it would actually benefit the people who need it	C. Do NOT change traffic patterns; do NOT touch the Midway; do NOT touch the Women's Garden
16	May 17 2020 07:29 PM		Agree with all above
17	May 17 2020 07:26 PM		c. I remain concerned about the closing of Cornell Drive, especially with multiple recent high lake level warnings from the City of Chicago. If Lake Shore Drive is forced to close periodically, traffic will have only Stony Island as an alternative. Not only is that my street, but it is also the main access for 3 or 4 schools, already busy every weekday morning.
18	May 17 2020 06:22 PM		a: There is already a very competent landscape architect specialist involved in developing landscape plans; I do not see the need for an additional specialist. b: I do not believe all the consulting parties need to sign the MOA or be involved in design decisions going forward.

19	May 17 2020 05:53 PM	(1) Impact study of rising water levels and change of design accordingly; current Jackson Park paths near lagoon are already swamped during heavy rains; more water in the lagoon will make this worse. (2) Replacement parking for Hayes Dr.	(b) the replacement recreation area should not be on the Midway-- this location is surrounded by busy roadways and so is not a healthy location for children's play; it also will add a playground to an area that is already well-served; new playground should be *in* Woodlawn neighborhood, as the old one was. Current plan is unjust/inequitable.
20	May 17 2020 02:26 PM	Do not use the Midway as a replacement recreational area. Mitigate the size and structure of the OPC to blend in with the historic structures in the park.	B
21	May 17 2020 11:22 AM		All great ideas, but the consulting parties should be carefully monitored to be sure they are acting in good faith in this process. Many of us are tired of those that are trying to derail this process and are not productively working towards realizing this plan.
22	May 16 2020 08:47 PM	Look at the impact on the surrounding neighborhoods of not having adequate parking in the OPC as planned for either the employees or the visitors.	c. An OPC in Jackson Park is NOT near any public transportation. Closing Cornell Drive will further tie up south Lake Shore Drive. Barack Obama will be hated by those who have to live with the results of his building his monument to himself in Jackson Park. The Federal Review organizations allowing him to do that will be justifiably vilified.
23	May 16 2020 08:38 PM	Redesign the footprint for the OPC and road changes as proposed in the JPW letter of May 5, 2020 that was submitted to Matt Fuller.	b. The proposal for a recreation area on the Midway is a separate initiative and would require a separate review not limited to groups signing the MOA for this 106 review. c. Traffic monitoring would constitute "mitigation" only if there were the option of revising the traffic arrangements proposed.
24	May 16 2020 06:14 PM	Use of a naturalist to provide input on how to preserve and expand existing wildlife sanctuaries.	See other feedback, above.
25	May 15 2020 10:26 PM	The best form of design review mitigation for traffic in and around Jackson Park would involve the maintenance of Cornell Drive as a public roadway.	Examples (a), (b) and (c) all improperly and inappropriately fail to make any attempt to avoid or mitigate deleterious project impacts.
26	May 15 2020 08:55 PM	Move the OPC to it's own, new, speciall, dedicated sp meace outside of Jackson Park so it can be a true monument for Obama's legacy rather than a travesty.	A, C are most critical; B will depend on what damage is done to the existing landscape.
27	May 15 2020 06:27 PM	A comprehensive restoration of all historic features of Jackson Park, including the restoration of all monuments, buildings, roadways, bridges and landscapes in Jackson Park.	A, B, C and more! Everyone needs to be included as this is everyone's park--part of Chicago's Lakefront Legacy

28	May 15 2020 06:23 PM		c. Effects of flooding on Lake Shore Drive on traffic.
29	May 15 2020 04:59 PM	Traffic impact monitoring BEFORE changes are made.	c
30	May 15 2020 04:05 PM	Move the OPC to a non-park location	Consider the importance of habitat preservation in the design.
31	May 15 2020 04:00 PM	Long term observation of traffic patterns and foot, bicycle patterns throughout the park. More places to sit down in the park.. Convenient parking with less complicated parking meters.	C.
32	May 15 2020 04:35 AM	Nothing will help except to shut down library and build elsewhere.	
33	May 15 2020 04:18 AM	Maintain trees and open space	c. Do not mess up traffic flows by shutting off currently used streets and drives.
34	May 15 2020 03:36 AM		c traffic impact monitoring including Stony Island Ave
35	May 15 2020 03:16 AM	Redesign the project to address the adverse impacts in the AOE	A through C do not offer mitigation yet alone required avoidance or minimization.
36	May 15 2020 02:55 AM	Identify other nearby areas for replacement recreation areas.	LEAVE THE MIDWAY ALONE!
37	May 14 2020 10:40 PM		a, b, c. b might be problematic but would incentivise stewardship
38	May 14 2020 10:32 PM	Reduce height of OPC substantially, do not close Cornell, do not widen LSD or Stony Island	Limit responses to 100 characters!?!?! You're kidding, right?
39	May 13 2020 06:43 PM	None	I support only (a) - use of a landscape architect
40	May 13 2020 05:52 PM		n/a
