**Existing bike lanes** Special pavement markings and signs identify bike lanes. They are 5' to 6' wide sections on each side of the street reserved for bicycle use and are usually established on streets with lots of traffic.

**Proposed bike lanes** (recommended bike route; bike lane proposed to be established)

**Open metal grate bridge** (use caution)

**Existing off-street trails** Paved paths separated from the road for bicyclists, walkers, runners, and in-line skaters.

**Recommended bike routes** Cars and bicycles share the street. Often established on quieter residential streets with traffic lights or stop signs provided at all major street crossings. Note: Some bike routes are identified on busy or commercial streets because they provide a unique route or commercial access and/or the streets are not wide enough to stripe bike lanes.

**Bike Shop Locations (May 2003)**

**Scale:** 0 to 0.25 mile / 0 to 0.25 km

**Compass:** N, S, E, W
